DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Claims

2. In Claim 1, lines 20,22 and 24 --bore -- has been deleted and --hollow bore-- has been inserted.

3. In Claim 5, line 2 --bore -- has been deleted and --hollow bore--has been inserted.

4. In Claim 6, line 4 --bore -- has been deleted and --hollow bore-- has been inserted.

5. The above change is made to put the claim in allowable condition.

Allowable Subject Matter

6. The following is an examiner's statement of reasons for allowance per MPEP 1302.

7. Claims 1-3,5,6,8,11,12,15,17,are deemed to be directed to a non-obvious Improvement over Tamura et al (Japanese patent publication JP2001073948) or Kojima et al (US patent publication 20040191094).

8. Claim 1 is drawn to hermetic compressor having a stator and rotor core. The rotor core further comprises a hollow bore and a through hole extending from a

Art Unit: 3746

first axial end of the rotor which directly faces the compression mechanism. The rotor core further comprises a through hole that extends from the first axial end of the rotor to a second axial end of the rotor and also comprises a built in permanent magnet having an axial length less than that of the rotor core. The axial dimension of the hollow bore is dimensioned to be at least $1/3$ of the axial length of the rotor core and a clearance between an inner surface of the hollow bore and an outer peripheral surface of the main bearing is set to 0.5 to 3mm. Applicants stated that their experimental analysis proved that in the claimed dimensional ranges the magnetic flux generated by the rotor increase while magnetic flux leaking decrease with remarkable increase in the efficiency while keeping compressor height at a minimum. Although both Fumitoshi and Kojima et al disclose a similar compressor neither one however teach the specified dimensional ranges. Thus In the examiner's opinion, it would not have been obvious to a person of ordinary skill in the art to at the time the invention was made to modify the compressor of Fumitoshi or Kojima et so that the axial dimension ratio between the hollow bore and the rotor is set to $1/3$ at minimum and the clearance between an inner surface of the hollow bore and an outer peripheral surface of the main bearing is set to 0.5 to 3mm.

Conclusion

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Amene S. Bayou whose telephone number is 571-270-3214. The examiner can normally be reached on Monday-Thursday, 8:00 am-5:00 pm.

Art Unit: 3746

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
